Accreditation Acceleration Lab

Speeding *the process of accrediting software for government missions.*

The Accreditation Acceleration Lab supports security testing and speeds the processes for industry to test and harden software. The lab is helping industry and government accelerate the Authority to Operate (ATO) processes.

A secure and private lab environment, the lab is remotely accessible via VPN and available for industry and government to do vulnerability and compliance security scans and software testing. Industry can run tests, looking for CAT 1 and CAT 2 vulnerabilities.

The lab offers private, self–evaluation opportunity. The lab also offers 3rd party testing.

Government and industry will achieve cost and time savings and risk mitigation by finding vulnerabilities much earlier in the accreditation process.

The Accreditation Acceleration Lab is hosted and supported by MITRE, and guided by the Technology & Innovation Roundtable. Mission requirements and partnership are provided by the U.S. Department of Defense.

To Learn More About the Roundtable

For more information about the Technology & Innovation Roundtable and to discover about government engagement opportunities with the Roundtable, contact Director and Chair Dr. Angela O'Hanlon, amcintee@mitre.org, or visit the Technology & Innovation Roundtable at: www.technologyroundtable.org
